

M&A Due Diligence

Find the breach before you inherit it.

FOR CORPORATE DEVELOPMENT TEAMS, PRIVATE EQUITY, AND THEIR ADVISORS

01 THE PROBLEM

An acquisition inherits every breach the target does not know about. Traditional cyber due diligence, built on questionnaires, policy reviews, and outside-in ratings, cannot see an active compromise, and the target's own tooling may be the very thing that is blind.

02 THE APPROACH

Because Mythic requires nothing deployed inside the target, it can assess live breach status during diligence without alerting the target's staff or touching their systems: whether target networks are communicating with adversary infrastructure, for how long, and with what severity. The same lens extends to the target's key vendors.

03 IN PRACTICE

Deal teams use the findings to price cyber risk into terms, scope remediation into integration plans, and structure indemnities around known exposure. And when the evidence warrants it, to walk away informed, before the breach becomes theirs.

FRAMEWORKS NIST CSF 2.0 ID.RA · ISO 27001 A.5.7 · ATT&CK TA0011

WHAT YOU GET

- Agentless assessment of a target's live breach status, with no access to target systems
- Identification of undisclosed or latent compromise that would otherwise surface post-close
- Evidence to price risk into the deal, structure indemnities, or walk away informed

EVERY CONFIRMED BREACH CARRIES

- 01 Date and time of breach
- 02 Victim and destination IPs
- 03 Port and protocol
- 04 Data exfiltrated by the implant
- 05 Machine, user, OS, file paths
- 06 The implant responsible

Nothing to install, no hardware, no access to any environment required. Mythic observes from the adversary's side of the exchange.

ABOUT VIGILOCTY

Vigilocity builds technology for identifying and eliminating threat actor infrastructure, drawing on decades of counterintelligence operations inside adversary networks.

THE METHOD

Reverse Attack Surface Analysis works from the attacker inward: tracking adversary infrastructure as it is built, then observing the victim networks that begin talking to it.

WHO RELIES ON MYTHIC

Global financial institutions, Fortune 100 brands, Big Four advisory firms, and national governments. Our clients do not appear on this page. That is part of the service.
